BMDC | Selected−module statistical dot plot
Each group vs the mean of the other two; paired subject + group model
GO:0048020, CCR chemokine receptor binding
GO:0005125, cytokine activity
mmu04657, IL−17 signaling pathway
GO:0032874, positive regulation of stress−activated MAPK cascade
GO:0090025, regulation of monocyte chemotaxis
GO:0097529, myeloid leukocyte migration
mmu04668, TNF signaling pathway
mmu04064, NF−kappa B signaling pathway
GO:0034341, response to type II interferon
GO:0070371, ERK1 and ERK2 cascade

Count: selected−module genes with normalized count >= 50 in >= 2 of 3 subjects.
Filled = BH−adjusted P < 0.05; hollow = not significant; +/− inside circles indicate higher/lower scores.
User−selected DEG modules; exploratory post−selection statistics, not GO/KEGG ORA.
